UNFPA	United Nations Population Fund

## Concepts and Definitions

**Population Census:** A population census is the total process of collecting, compiling, evaluating, analyzing and publishing or otherwise disseminating demographic, economic and social data pertaining to all persons in a country or in a well delimited part of a country at a specified time.

**De factor count:** Count of all persons present in a country/locality on census night.

**De Jure count:** Count of all persons usually resident in a country/locality as of census night

**Inter-censal period:** The period between two censuses. For most developing countries, this period is 10 years.

**Migration** is a form of geographic or spatial mobility involving a change of usual residence between clearly defined geographic units. Some changes of residence are temporal and do not involve change of usual residence. Other changes of residence although permanent are short distant movement. These raise the question of who a migrant is. In other words, one has to consider the time, distance travelled and intention in deciding who qualifies to be called a migrant. In the analysis of the 2013 Population and Housing Census, two forms of migration were looked at namely: internal migration and international (external) migration.

**Population Density:** The total population of a given area divided by that land area. It measures the number of persons per square kilometre.

**Average Annual Growth Rate:** Average rate of growth of the population per annum.

**Urban:** According to the 2013 Population and Housing Census, a settlement is considered urban if it satisfies most of the following:

- Has commercial importance
- Has institutional importance
- Majority of the population should be non-agricultural in occupation
- Population should be 5,000 and above
- Density should be high
- Some degree of infrastructure should be available

**Rural:** All settlements that do not meet the criteria described above are considered rural.

**Household:** This consists of a person or group of persons who live together in the same house or compound, share the same house-keeping and catering arrangements. It is important to remember that members of a household may not necessarily be related (by blood or marriage) as for instance, maid-servants can be household members.

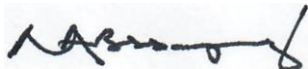

**Sex Ratio:** Sex ratio is the number of males per 100 females in a given population. Sex ratio less than 100 indicates that there are relatively more female, whilst a sex ratio greater than 100 indicates that there are relatively more males than females. In general, sex ratios below 90 or above 110 are usually the result of migration, abnormally high levels of mortality caused by wars or disease epidemics, under count or over count of one of the sexes etc.

## **Preface**

This is Volume 5 of the 2013 Population and Housing Census report. The main objective of the report is to provide policy makers, data users and researchers with information on the population with regards to its size, population growth rate, population density, distribution across LGAs and place of residence, marital status, and ethnicity.

We thank Mr Ansumana Ceesay of the National Population Commission Secretariat (NPCS) for the preparation of this report. We also thank Saikou JK Trawally and Paul .T. Mendy all of (NPCS) and the GBoS staff for finalizing the report.

We wish to extend sincere thanks to The Gambia Government for providing funding for the conduct of the census, and the United Nations Population Fund (UNFPA) for their support both technical and financial for the conduct of the 2013 Population and Housing Census.

Nyakassi M.B Sanyang

Statistician General

## Executive Summary

The population of The Gambia registered a growth rate of 3.1 per cent per annum over the inter-censal period (2003-2013). This shows an increase in the population growth rate compared with the 1993-2003 inter-censal period, which recorded an average annual growth rate of 2.7 per cent.

Across LGAs, Banjul is the only LGA that registered a negative population growth rate of 11.4 percent. The population decline for Banjul is not quite surprising since a decline in the population of this LGA was first observed in 1983. Most residents of Banjul are migrating to the Kanifing and Brikama LGAs. The Brikama LGA had the highest population growth rate of 5.7 per cent per annum over the 2003-2013 inter-censal period. This illustrates a shift in the pattern of population distribution across LGAs during the 1983-1993 inter-censal period when the Kanifing LGA registered the highest growth rate.

About 51 per cent of the population of The Gambia are females. Apart from Banjul, Kanifing and Brikama where males constitute the majority, females accounted for the highest proportion in the remaining LGAs. The differentials in the distribution of the population by sex across the LGAs largely depicts migratory trends. Banjul has the highest out-migration rate. The Kanifing and Brikama LGAs are more of receiving LGAs of both internal and international migrants. As migration is sex selective i. e. males are more likely to migrate than females, females predominate in the remaining LGAs of Kerewan, Mansakonko, Kuntaur, Janjanbureh and Basse.

Sex ratio for The Gambia was 97 males per 100 females. However, there were differentials across Local Government Areas. The sex ratio ranges from 90 males per 100 females in Kuntaur to 118 males per 100 females in Banjul.

In 2013, 42.7 per cent of the population were below 15 years of age, 21.4 per cent were within the age-group 15–24. Only 3.1 per cent were aged 65 years and over.

The population density at the national level was estimated to be 174 persons per square kilometre and this is one of the highest in the sub-region in 2013. Over the years, the overall population density has increased from 64 persons per square kilometre in 1983 to 97 persons per square kilometre in 1993; to 127 persons per square kilometre in 2003. The Kanifing LGA has the highest population density of 4,992 persons per square kilometre followed by Banjul with 2,539 persons per square kilometre and, Brikama with 390 persons per square kilometre. The Mansakonko LGA had the lowest population density of 50.4 persons per square kilometre.

The 2013 census figures show that 96.0 per cent of the population are Muslims and 3.8 per cent Christians whilst the rest of the population (0.2 per cent) practiced traditional or other religions.

Mandinka constitutes the largest ethnic group (34.4 per cent) of the total Gambian population. The Second largest ethnic group is Fula with 24.1 per cent, followed by Wollof with 14.8 per cent. The Jola ethnic group accounted for 10.5 per cent of the population. Sarahules constitute 8.2 per cent and Creole/Aku Marabous accounted for 0.5 per cent.

Out of the population of 1,857,181 enumerated in the 2013 census, 110,705 persons or 6.0 per cent were reported to be non-Gambians. Among the non-Gambians, Senegalese constitute the majority with 44.3 per cent followed by Conakry Guineans who constitute 27.8 per cent of the population, Bissau Guineans 5.5 per cent, Sierra Leoneans 4.8 per cent and Nigerians 4.2 per cent. Malians, Mauritians and Ghanaians accounted for the lowest proportions. The data shows that the percentage of non-Gambian population has declined during the inter-censal period (2003-2013) from 8.4 per cent in 2003 to 6.0 per cent in 2013.

In 2013, 46.8 per cent of the population of The Gambia aged 12 years and over were reported to be Never married, whilst 48.8 per cent were married. Those divorced accounted 1.2 per cent, while those separated and widowed accounted 0.4 and 2.9 per cent respectively.

The most prevalent form of marital union in The Gambia was monogamous constituting 66.6 per cent of the ever married population whilst polygamous marriages accounted for 30.3 per cent of the ever married population. For monogamous marriages, relatively more males (73.1 per cent) than females (63.6 per cent) were in monogamous union.

Teenage marriage continues to be practiced in The Gambia, overall, 6.6 per cent of girls aged 12-19 years were reported to be married in 2013. Within ethnic groups, the Sarahules and Fulas accounted for the highest married teenage population with 9.4 per cent and 9.2 per cent respectively. However, when compared to the 2003 figures (11.9 per cent) the data shows a decline in teenage marriages in The Gambia.

# CHAPTER 1: INTRODUCTION

## 1.1 Background

Population censuses are usually conducted periodically to study population change over time. Censuses have been the most complete source of information on the population of The Gambia. Since 1881, censuses have been conducted in The Gambia at fairly regular intervals of ten years. However, the 1941 Census could not be conducted due to the Second World War. The census was deferred to 1944 and covered only Bathurst and Kombo St. Mary's (now Kanifing LGA) with the population of the rest of the country based on estimates by Travelling Commissioners. The 1961 Census was also deferred to 1963 because of the general elections that year. The 1963 Census was the first simultaneous count of the country's population. Censuses were then conducted with intervals of ten years from 1973.

Population censuses have been the main source of demographic data for The Gambia. In addition to providing estimates on fertility, mortality and migration, it also provided useful information on the size, composition, distribution of the population of The Gambia at fixed intervals. Over the years, census data have been extensively used for the planning and provision of social services such as schools, health services, roads etc. As these services require planning to keep pace with the population growth and distribution, the importance of census data cannot be overemphasised.

The spatial distribution of the population of The Gambia is uneven as a result of the high rural-urban migration. For example, the Brikama (37.1 per cent) and Kanifing (20.3 per cent) LGAs, which are the main destination areas of the migrants, have the largest share of the 2013 total population.

## 1.2 Methodology

According to the UN, the total population of a country consists of all the persons enumerated within the scope of the census. In the broadest sense, the total may comprise either all usual residents of the country or all persons present in the country at the time of the census. The total of all usual residents is generally referred to as the *de jure* population and the total of all persons present on census night is referred to as the *de facto* population. In practice, countries do not usually achieve either type of count, because one or another group of the population is included or excluded depending on the national circumstances. It is recommended that each country describes in detail the figure accepted officially as the total population, rather than simply label it as *de jure* or *de facto*.

In all the previous censuses, including the 2013 Population and Housing Census, data on *de facto* and *de jure* count were collected (from the census questionnaires –GPC3 and GPC5 respectively for usual member's present and usual members absent on census night).

However, since this *de facto* method is the most used for analysis, all the demographic and socio-economic characteristics of the population present on census night or a survey are collected through this method. Thus, all the analyses in this report are based on the *de facto* population.

In *de facto* censuses, the main challenge is the counting of the transient or 'floating' population (i. e. persons who happened to be travelling on census night or who worked at night and consequently would not be found in households or houses). For the 2013 census, arrangements were made to count persons travelling in lorries, cars, in hotels, hospitals/health centres, the airport, watchmen, fishermen and the homeless such as, those sleeping in market verandas, car parks etc. At the household level, all persons who spent census night in the household were enumerated, whilst those who are usual members of households who spent census night in locations different from their residents were enumerated where they spent census night. All Gambians and non-Gambians who were present within the boundaries of the country on census night (15<sup>th</sup> April, 2013), including visitors, were enumerated. However, the census excluded Gambians living abroad and Gambian diplomatic personnel and their families who were abroad during the census reference period.

As was the case in the previous censuses, the direct interview method of enumeration was adopted in the 2013 Population and Housing Census. The enumerators visited the households and institutions and enumerated all persons present on census night.

Arrangements were made to enumerate the institutional population (i.e. prisons, boarding schools, hospitals etc.), out-door sleepers' persons found at border posts, markets, hotels etc. and other floating population on the night of the census.

### **1.3 Limitations**

In The Gambia, very few settlements have designated boundaries. Settlement boundaries in some cases overlapped and it was difficult to clearly delineate the boundaries and ensure full coverage during the enumeration.

Age mis-reporting was a major challenge during the census, which could be attributed to the respondents not able to give their correct ages. This could be mainly due to low literacy rates or errors in recording ages properly by enumerators.

Another challenge relates to the nationality of the respondents. During the census, the enumerators relied on the respondents to accurately report their nationalities. However, there might have been instances where respondents reported themselves as Gambians when they are non-Gambians. For instance, the non-Gambian respondents might have reported themselves as Gambians to evade the payment of the Alien Tax.

## **CHAPTER 2: SPATIAL DISTRIBUTION OF THE POPULATION AND SOCIO-CULTURAL CHARACTERISTICS**

### **2.1 Population size, growth and percentage distribution**

A country's population is the vehicle of its development and the centre of all its planning activities. Meaningful development activities of a country cannot be implemented without taking into account the population size, structure, growth and change over time, as well as socio-economic characteristics. Sectoral or national development planners therefore need to take into account population dynamics in the entire planning process. The Kilimanjaro Plan of Action on Population (KAP) and the Self-Reliant Development adopted by African Countries in 1984 and reinforced in the 1994 International Conference on Population and Development strongly recommend that population should be a key factor in the formulation of development strategies and plans. This is a clear indication of the inter-relationship between population and development.

In land use and settlement planning for example, there is need to provide the current as well as projected population variables in order to determine the size and distribution of land use. Development planners and policy makers make use of demographic data to design policies and programmes on health, poverty eradication, education, gender and empowerment of women and governance among others. Furthermore, demographic data can be used for human resource analysis, for the design of social-welfare schemes, employment policies, migration policies, population projections for national development plans and programmes for socio-economic development.

With regards to socio-cultural characteristics, the information on ethnicity have extensively been used by programmes particularly in the design of Information, Education and Communication (IEC) for behavioural change and other communication strategies. The information on nationality would help in determining the magnitude of net-migration. Another socio-cultural characteristic addressed in this chapter is religion, which plays a central role in the lives of the people.

### **2.1.1 Percentage distribution of population size and growth rate by LGA**

In the context of development, the mere size of a population does not mean much unless it is linked to available resources. The relationship between population growth and economic development cannot be over-emphasized as both are inextricably linked. Additional people can be beneficial in creating more wealth with the potential to advance development. Yet in most African countries, rapid population growth has led to slow economic growth with implications on development.

Rapid population growth has a strong impact on a country's ability to provide basic social services, such as education and health care. The effect of rapid population growth on the environment is quite evident. In many regions of the world, particularly the Sahel, the soil is being washed away, forest covers are disappearing, deserts are spreading and wildlife being threatened, and water resources depleting. The rapid growth of population translates into increased human needs and intensified pressure on available resources. As a result, the quantity and quality of natural resource base tends to decline.

The total population of The Gambia on April 15<sup>th</sup> 2013 was 1,857,181 persons (913,755 males and 943,426 females). This is an increase of 496,500 persons over the 2003 figures of 1,360,681. The population growth rate declined from 4.2 per cent per annum in 1993 to 2.7 per cent in 2003 and has increased slightly to 3.1 per cent per annum in 2013 (refer to annex, Table B.2). Annex Table B.1 shows that the population of The Gambia has increased steadily over the past 3 decades from about half a million in 1973, to about 1.9 million in 2013.

The Brikama LGA has the largest population followed by the Kanifing with 37.1 and 20.3 per cent respectively of the total population. The Banjul, Mansakonko, Kuntaur and Janjanbureh LGAs had the lowest proportions with 1.7, 4.4, 5.2 and 6.7 per cent respectively of the total population. The Brikama LGA had the highest population growth rate (5.7 per cent) followed by Basse (2.6 per cent) whilst Banjul had a negative population growth rate (-1.2 per cent). The negative population growth rate for Banjul could be attributed to out-migration of the population mainly to the Kanifing and Brikama LGAs. In fact, Banjul LGA experienced its first negative population growth rates of (-0.4 per cent) and (-1.9 per cent) respectively for the 1983-1993 and 1993-2003 inter-censal periods. The high growth rates experienced in the Brikama LGA could be attributed to the large influx of internal migrants from the rural areas and from other LGAs as well (refer to annex, Table B.2).

## 2.1.2 Percentage distribution of population by LGA

The total population of The Gambia was 1,857,181 in 2013, of which 49.2 per cent were males and 50.8 per cent were females. With the exception of Banjul and Kanifing LGAs, the other LGAs have relatively more females than males. Brikama LGA is the only LGA which had equal proportion of both sexes (Table 2.1.2 below).

**Table 2.1.2: Percentage distribution of the population by LGA and sex**

LGA	Population			Percentage share of the population		
	Male	Female	Total	Male (%)	Female (%)	Total (%)
Banjul	16,803	14,251	31,054	54.1	45.9	100.0
Kanifing	189,161	187,973	377,134	50.2	49.8	100.0
Brikama	344,621	344,123	688,744	50.0	50.0	100.0
Mansakonko	38,772	42,270	81,042	47.8	52.2	100.0
Kerewan	105,912	114,168	220,080	48.1	51.9	100.0
Kuntaur	45,685	51,018	96,703	47.3	52.7	100.0
Janjanbureh	60,000	65,204	125,204	48.0	52.1	100.0
Basse	112,801	124,419	237,220	47.6	52.5	100.0
<b>Total</b>	<b>913,755</b>	<b>943,426</b>	<b>1,857,181</b>	<b>49.2</b>	<b>50.8</b>	<b>100.0</b>

## 2.1.3 Distribution of the population by sex and residence

In general, the rural areas had more females (51.9 per cent) compared to males (48.1 per cent). This can be attributed to migration which is both sex and age selective. However, the equal proportion of males and females in the urban population was more of urban reclassification of settlements than migration (Table 2.1.3 below). Most of the urban reclassification occurred in the Brikama LGA, where the proportion of males and females were the same (Table 2.1.2 above).

**Table 2.1.3: Percentage distribution of the population by residence and sex**

Residence	Population			% share of the population		
	Male	Female	Total	Male (%)	Female (%)	Total (%)
Urban	537,005	536,822	1,073,827	50.0	50.0	100.0
Rural	376,750	406,604	783,354	48.1	51.9	100.0
<b>Total</b>	<b>913,755</b>	<b>943,426</b>	<b>1,857,181</b>	<b>49.2</b>	<b>50.8</b>	<b>100.0</b>

### **2.1.4 Distribution of the population by religion**

According to the 2013 Census, the population of The Gambia is predominantly Muslim (96.0 per cent) followed by Christianity (3.8 per cent). Traditionalist and people who practice other religions each accounted for 0.1 per cent.

## **2.2 Population density**

In 2013, the overall population density was estimated at 173.9 persons per square kilometre, one of the highest in the Sub-Saharan Africa. Over the years, the population density of The Gambia has increased from 64 persons per square kilometre in 1983 to 97 persons per square kilometre in 1993 and further increased from 127 persons per square kilometre in 2003 to 173.9 persons per square kilometre in 2013.

Banjul, Kanifing and Brikama LGAs had the highest population densities. In 2013, the population density of Kanifing (4,991.8 persons per square kilometre) surpassed that of Banjul (2,539.2 persons per square kilometre), while the Brikama LGA had a population density of 390.4 persons per square kilometre. Unlike Kanifing, where the population density continues to rise, Banjul's population density has been declining in the past three decades. This could be attributed to the fact that the city is an island and there is no more room for human settlement, thus, there has been migration of people from Banjul to Kanifing and Brikama (refer to annex, Table B.3).

## **2.3 Population by age and sex**

The demographic significance of age and sex cannot be over-emphasized. These variables determine the future demographic trends and are in turn influenced by the dynamics of population (i.e. fertility, mortality and migration).

During the census information on age and sex of persons were collected. The person's age was recorded in complete years as at 15<sup>th</sup> April 2013. For persons who did not know their ages, a calendar of events was used to assist them estimate their ages. This was meant to reduce the incidence of people who reported they don't know their ages and also to improve on the coverage and accuracy of age reporting.

According to the 2013 Census, The Gambia has an overall median age of 18.2 years with 17.8 and 18.5 years respectively for males and females. The median age divides the population into two halves i.e. the age at which 50.0 per cent of the population are above and 50.0 per cent are below. These low median ages mean that the country has a relatively young population.

Table 2.3 below shows that 42.7 per cent of the population was below 15 years of age, 23.4 per cent within the age-group 10-14 years and 21.4 per cent within the age group 15–24 years. Only 3.1 per cent of the population were 65 years and over.

**Table 2.3: Percentage distribution of the population by five-year age group and sex**

Age group	Population			% share of the population		
	Male	Female	Total	Male (%)	Female (%)	Total (%)
0-4	147,752	144,102	291,854	16.2	15.3	15.7
5-9	141,334	138,732	280,066	15.5	14.7	15.1
10-14	110,434	109,711	220,145	12.1	11.6	11.9
15-19	102,995	111,269	214,264	11.3	11.8	11.5
20-24	86,075	97,864	183,939	9.4	10.4	9.9
25-29	74,341	85,015	159,356	8.1	9.0	8.6
30-34	56,957	65,212	122,169	6.2	6.9	6.6
35-39	45,922	48,644	94,566	5.0	5.2	5.1
40-44	36,485	36,544	73,029	4.0	3.9	3.9

<b>Total</b>	<b>913,755</b>	<b>943,426</b>	<b>1,857,181</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

The youthfulness of the population of The Gambia can be attributed to the decline in mortality among children. By implication, the high proportion of the population between the ages 15–24 years in The Gambia would continue to grow even if fertility declines slightly. As these people are within the reproductive age groups, sooner or later they would start procreating and the population would continue to grow. The youthfulness of the population also has socio-economic implications for development ranging from the building of more schools, investments in health care, job creation and the provision of skills acquisition centres.

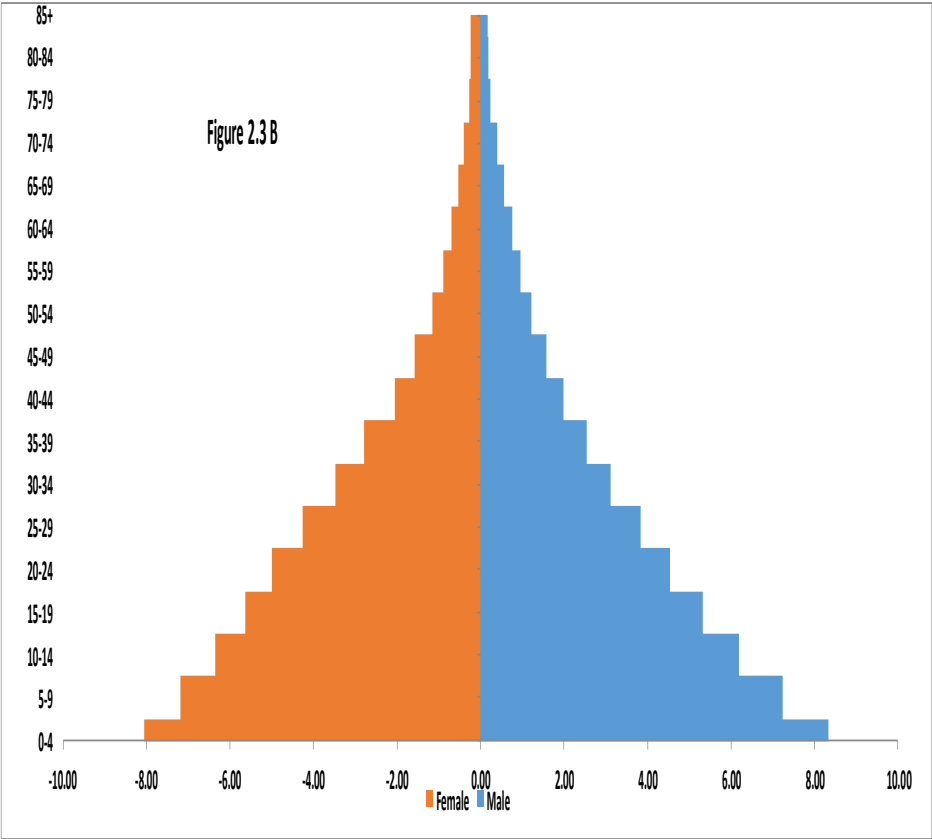

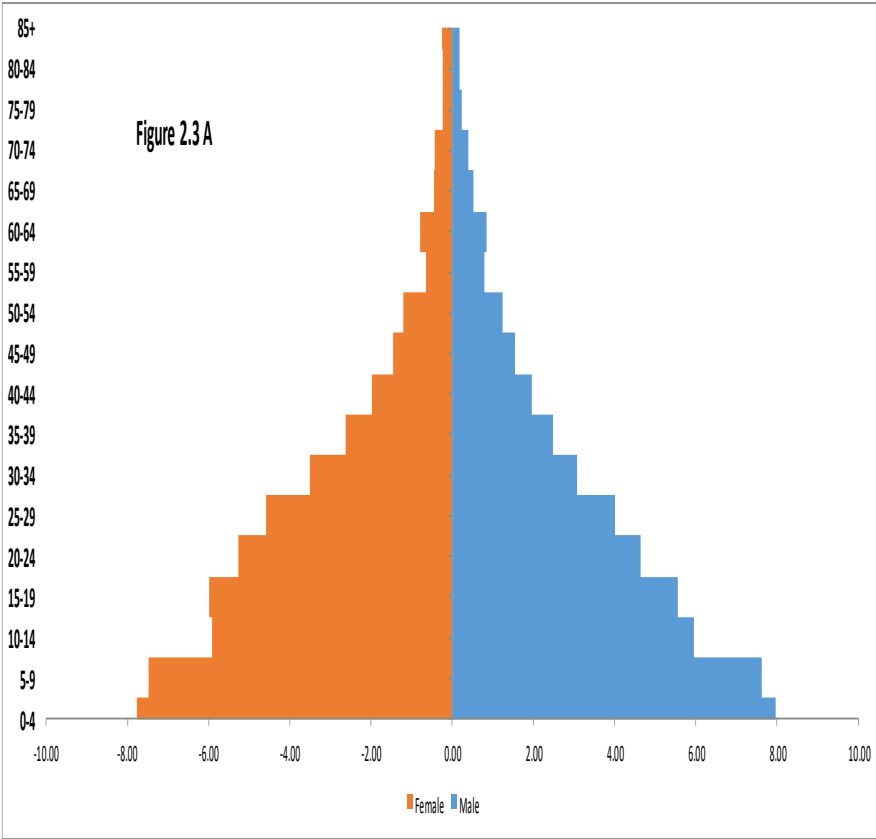

Population pyramids are of different shapes and are determined by three factors: fertility, mortality and migration. The population pyramids with broad bases narrowing towards the older ages are typical of countries in the early stage of demographic development with high fertility and mortality rates and a youthful age structure. The age and sex pyramids of African countries have this type of shape.

Figures 2.3 A and B below, shows the population pyramids of the 2013 Census. Figure 2.3 A (left-hand side) is based on the reported data and Figure 2.3 B (right-hand side) is based on

“smoothed” data (i.e. reported data “smoothed” for age mis-reporting, age heaping and/or digit preference and distortions using demographic techniques).

Comparing Figure 2.3 A (reported data) and Figure 2.3 B (“smoothed” data) shows deficit of children (under-reporting) in the 0-4 age group for both sexes. In fact, there is little difference between the 0-4 and 5-9 age groups. This suggests that some children aged 4 years might have been reported as 5 year olds. There are also huge deficits in the 10-14 age groups due mainly to age misreporting and/or upward age shifting. However, both phenomena (i.e. age misreporting and shifting) are more common among females particularly in the older age groups most of whom do not know their ages (Figure 2.3 A).

**Figure 2.3 A and B: Percentage distribution of age-sex population pyramid, Population and Housing Census 2013**

## 2.4 Distribution of the population

As the trend in most developing countries of Sub-Saharan Africa, there has been a rapid increase in the urban population due mainly to the high internal migration from the rural areas and immigrants from outside The Gambia. Until the mid-1970s rural-urban migration in The Gambia was of a seasonal nature when rural dwellers migrated to the urban areas in search of work during the dry season and returned to the rural areas to farm as the rainy season starts. Consecutive years of drought in the late 1970s and the resultant effects of reduced agricultural outputs triggered a new migratory trend. Since this period, many rural migrants decided to stay in the urban areas.

### 2.4.1 Population distribution by residence and LGA

At the national level, the proportion of the population residing in urban areas has increased from 50.4 per cent in 2003 to 57.8 per cent in 2013. Among the LGAs which have rural characteristics Brikama has the highest rate of urbanization. For instance, in 2003, 60.3 per cent and 39.7 per cent of the population resided in the urban and rural areas respectively; compared to 73.6 per cent and 26.4 per cent of the population who lived in the urban and rural areas respectively in 2013. The Kuntaur, Janjanbureh and Mansakonko LGAs are the least urbanized with 92.7, 85.1 and 81.4 per cent respectively of their population living in the rural areas (Table 2.4.1 below).

**Table 2.4.1: Percentage distribution of the population by LGA and residence**

LGA	2003			2013		
	Urban	Rural	Total	Urban	Rural	Total
Banjul	100.0	0.0	100.0	100.0	0.0	100.0
Kanifing	100.0	0.0	100.0	100.0	0.0	100.0
Brikama	60.3	39.7	100.0	73.6	26.4	100.0
Mansakonko	18.4	81.6	100.0	18.7	81.4	100.0
Kerewan	20.1	79.9	100.0	22.8	77.2	100.0
Kuntaur	6.4	93.6	100.0	7.3	92.7	100.0
Janjanbureh	15.5	84.5	100.0	14.9	85.1	100.0
Basse	13.0	87.0	100.0	28.6	71.4	100.0
<b>Total</b>	<b>50.4</b>	<b>49.6</b>	<b>100.0</b>	<b>57.8</b>	<b>42.2</b>	<b>100.0</b>

## 2.5 Sex ratio

Sex ratio less than 100 indicates that there are relatively more females, whilst a sex ratio greater than 100 indicates that there are relatively more males than females. In general, sex ratios below 90 or above 110 are usually the result of migration, abnormally high levels of mortality caused by wars or disease epidemics, an undercount or over count of one of the sexes.

### 2.5.1 Sex ratio by Local Government Area

Table 2.5.1 below shows that the sex ratio for The Gambia in 2013 was 97 males per 100 females. Banjul had the highest sex ratio of 118 males per 100 females. Given that Banjul has had a negative growth rate in the last three decades due mainly to male out-migration to Kanifing, this unusually high sex ratio suggests either an under-count of the female population or an over-count of the male population. The Mansakonko, Kerewan, Kuntaur, Janjanbureh and Basse LGAs all had sex ratios ranging from 90 males per 100 females.

**Table 2.5.1: Population by Local Government Area and sex ratio**

LGA	Population			Sex Ratio
	Male	Female	Total	
Banjul	16,803	14,251	31,054	118
Kanifing	189,161	187,973	377,134	101
Brikama	344,621	344,123	688,744	100
Mansakonko	38,772	42,270	81,042	92
Kerewan	105,912	114,168	220,080	93
Kuntaur	45,685	51,018	96,703	90
Janjanbureh	60,000	65,204	125,204	92
Basse	112,801	124,419	237,220	91
<b>Total</b>	<b>913,755</b>	<b>943,426</b>	<b>1,857,181</b>	<b>97</b>

## CHAPTER 3: ETHNICITY AND NATIONALITY

### 3.1 Population distribution by ethnicity

The Gambia like most African countries has several ethnic groups. In the 2013 Census, nine ethnic groups were identified and the rest were classified under “other ethnic groups”. Information on ethnicity was only collected from the Gambian population.

Table 3.1.1 shows the distribution of the population by ethnicity for 1983, 1993, 2003 and 2013. Mandinka’s constituted the largest ethnic group in the 2013 with 34.4 per cent. However, the proportions of Mandinkas have been declining over the years as the other ethnic groups (Fula and Wollof) also increase their percentage share of the overall population. The Second largest ethnic group was Fula/Tukulor/ Lorobo with 24.1 per cent. This is followed by Wollof and Jola with 14.8 per cent and 10.5 per cent of the population respectively. The Sarehulehs and Sereres constitute 8.2 per cent and 3.1 per cent of the population respectively, while the Creole/Aku Marabous accounted for the least ethnic group with 0.5 per cent.

**Table 3.1.1: Percentage distribution of the Gambian population by ethnicity 1973,1983,1993,2003 and 2013 Censuses**

Ethnic groups	Population					% share of the population				
	1973	1983	1993	2003	2013	1973	1983	1993	2003	2013
Mandinka/ Jahanka	186,241	251,997	353,840	446,914	600,165	42.3	40.8	39.5	35.9	34.4
Fula/Tukulor/ Lorobo	79,994	117,092	168,284	272,354	420,206	18.2	19.0	18.8	21.9	24.1
Wollof	69,291	84,404	130,546	179,890	258,065	15.7	13.7	14.6	14.5	14.8
Jola/ Karoninka	41,988	64,494	95,262	141,360	182,807	9.5	10.4	10.6	11.4	10.5
Sarahule	38,478	51,137	79,690	101,347	142,606	8.7	8.3	8.9	8.1	8.2
Serere	9,229	15,511	24,710	37,979	5 3,567	2.1	2.5	2.8	3.1	3.1
Creole/Aku Marabou	5,596	10,741	7,458	24,492	8,477	1.3	1.7	0.8	2.0	0.5
Manjago	1,722	3,035	6,1 94	13,043	32,408	0.4	0.5	0.7	1.0	1.9
Bambara	4,386	5,032	16,550	6,556	22,583	1.0	0.8	1.8	0.5	1.3
Other	-	4,356	2,578	2,520	25,462	-	0.7	0.3	0.2	1.5
Not stated	3,791	9,440	11,023	17,418	86	0.9	1.5	1.2	1.4	0.0
<b>Total</b>	<b>440,716</b>	<b>617,239</b>	<b>896,135</b>	<b>1,243,873</b>	<b>1,746,432</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

## 3.2 Population distribution by ethnicity and LGA

All the ethnic groups were found in each of the LGAs, although their proportions differ. The Mandinkas are found in large numbers in the Kanifing, Brikama and Mansakonko LGAs while the Fulas form the majority in the Kuntaur and Janjanbureh LGAs. The Wollofs constitute the majority in the Banjul and Kerewan LGAs and the Jolas are found mainly in the Kanifing and Brikama LGAs. The Sarahules are predominantly found in the Basse LGA while the Sereres and Creole/Aku Marabou are predominantly found in Banjul (Table 3.2 below).

**Table 3.2: Percentage distribution of Gambians by ethnicity and LGA**

Ethnic groups	Local Government Area							
	Banjul	Kanifing	Brikama	Mansa konko	Kerewan	Kuntaur	Janjan bureh	Basse
Mandinka/Jahanka	22.5	32.2	39.8	55.7	30.8	23.9	24.6	28.9
Fula/Tukulor/ Lorobo	20.9	17.3	19.7	32.1	21.9	41.1	41.2	29.8
Wollof	24.4	14.6	10.7	4.7	31.4	32.6	25.4	0.6
Jola/Karoninka	6.8	16.4	18.6	1.3	1.0	0.3	0.6	0.3
Sarahule	3.9	7.5	2.3	3.6	0.6	0.3	6.7	38.9
Serere	11.8	4.7	2.8	0.5	7.3	0.4	0.3	0.1
Creole/Aku Marabou	4.3	1.4	0.3	0.1	0.1	0.0	0.0	0.1
Manjago	1.1	2.9	2.9	0.8	1.0	0.1	0.2	0.1
Bambara	2.6	0.9	0.7	0.7	5.0	0.6	0.5	0.8
Other	1.7	2.0	2.1	0.5	1.0	0.7	0.6	0.4
<b>Total</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

### 3.3.1 Non-Gambian population

The non-Gambian population has doubled in size during the 1983–1993 inter-censal period. From 1993 to 2013, the non-Gambian population has declined from 134,118 in 1993 to 114,968 in 2003 and to 110,705 in 2013. This decline could be partly attributed to returning home and re-settlement of large number of refugees from the then conflict ridden countries in the sub-region such as Sierra Leone and Liberia (refer to annex, Table B.5).

### 3.3.2 Distribution of the population by nationality and LGA

The Gambians form the majority in all the LGAs representing 94.0 per cent of the total population (refer to annex, Table B.4). The non-Africans are largely concentrated in Banjul, Kanifing and Brikama LGAs. The Senegalese constituted the majority of non-nationals with 44.3 per cent (refer to annex, Table C.1) of the total enumerated population in 2013.

### **3.3.3 Distribution of non-Gambians by nationality**

The proportion of Guinea-Bissau nationals in The Gambia has been declining over the last three decades, from 9.3 per cent in 1983 to 6.3 per cent in 1993 and further declined to 4.8 per cent in 2003 followed by an upsurge of 5.5 per cent in 2013. The steep declines in the last three decades (1983-2003) could be attributed to the return of the refugees following the end of the war for independence with the Portuguese, which culminated in Guinea-Bissau's independence in 1974. The slight upsurge in the 2013 proportion of Guinea-Bissau nationals might be the result of the series of unrest and frequent changes of government experienced by Guinea-Bissau which ushered in a period of political and economic instability up until 2013 (refer to annex, Table C.1).

## CHAPTER 4: MARITAL STATUS AND TYPE OF UNION

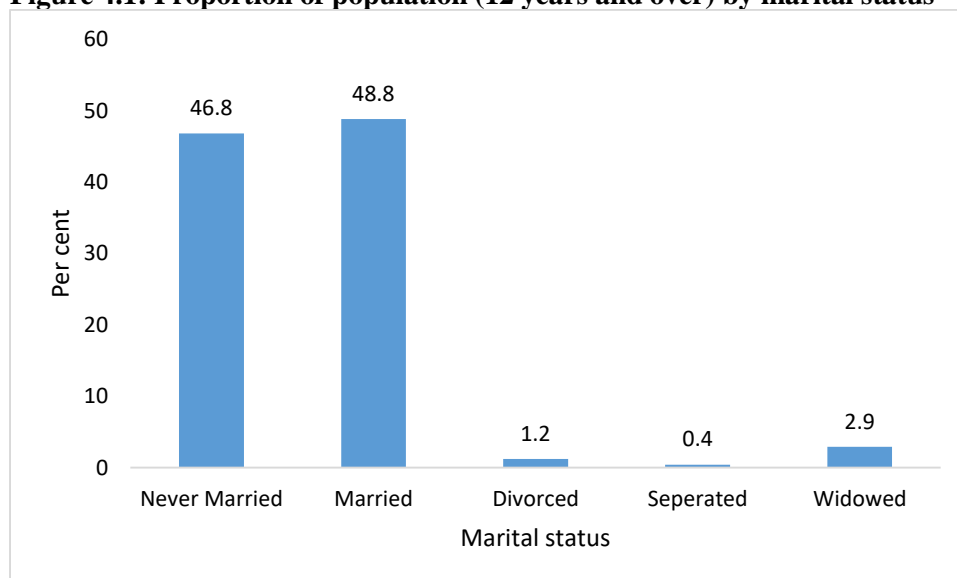

### 4.1 Population aged 12 years and over by marital status and sex

Marital status is an important factor in population studies as it affects fertility, mortality and migration. It also affects other social and economic characteristics, such as the participation of women in the labour force, school attendance and retention etc. In general, marriage patterns tend to vary across age, sex, socio-economic status and LGA. For example, in most African societies, females marry earlier than males.

In The Gambia, the types of marriages that exist are customary, civil and religious. Although the provision exists for the registration of marriages, most marriages are not registered and the few that are registered are often registered to meet legal requirements.

Overall, about 47.0 per cent of the population aged 12 years and over were Never married and about 49.0 per cent were married in 2013. The proportions of the population who were divorced and widowed were comparatively low and remained unchanged at 1.2 per cent and 2.9 per cent respectively during the inter-censal period 2003-2013. However, there has been a sharp decline in the proportion of the population who separated during the same period i.e. from 3.0 per cent in 2003 to 0.4 per cent in 2013 (Figure 4.1).

**Figure 4.1: Proportion of population (12 years and over) by marital status**

In the 1983 and 1993 Censuses, data on marital status were collected from the population 10 years and over; whereas in the 2003 and 2013 censuses, they were collected from the population 12 years and over. More than half of the male population, 56.6, 58.5 and 56.7 per cent respectively for 1993, 2003 and 2013 were Never married. Comparatively, only 32.6, 35.5 and 36.2 per cent of the female population were Never married during the same period. As expected, more females were married compared to males. Female marriages constituted

67.7 per cent, 61.1 per cent, 57.5 per cent and 55.8 per cent respectively for 1983, 1993, 2003 and 2013. The corresponding figures for males were 45.5 per cent, 40.9 per cent, 39.3 per cent and 39.9 per cent respectively for the same period. In general, the proportions divorced, separated and widowed have decreased in the past three decades. For example, there was a decline in widowhood among the female population from 3.7 per cent in 1983 to 0.5 per cent in 2003. However, there was a slight increase in female widowhood from 3.7 per cent in 1983 to 5.2 per cent in 2013. While the decline from 1983 to 2003 could be attributed to improvements in male mortality (i.e. life expectancy), the reasons for the upsurge in female widowhood in 2013 were not clear (Table 4.1).

**Table 4.1: Percentage distribution of the population by marital status and sex, 1983, 1993, 2003, and 2013 Censuses**

Marital Status	1983		1993		2003		2013	
	Male	Female	Male	Female	Male	Female	Male	Female
Never married	49.6	24.5	56.6	32.6	58.5	35.5	56.7	36.2
Married	45.5	67.7	40.9	61.1	39.3	57.5	39.9	55.8
Divorced	1.5	1.3	1.0	1.5	0.7	1.5	0.6	1.8
Separated	0.8	1.2	0.3	0.6	0.2	0.5	0.2	0.5
Widowed	0.6	3.7	0.4	3.5	0.2	0.5	0.4	5.2
Not stated	2.0	1.2	0.9	0.7	0.3	4.4	2.3	0.6
<b>Total</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

Note: Marital Status for 1983 and 1993 was collected for the population aged 10 years and over and for 2003 and 2013 for the population aged 12 years and over.

## 4.2 Population aged 12 years and over by marital status, sex and residence

Table 4.2 shows the percentage distribution of population aged 12 years and over by marital status, sex and residence. The data show that 48.9 per cent of the urban population were never married compared to 41.7 per cent of the rural population. The proportion divorced is nearly twice higher in the urban area (1.5 per cent) compared to the rural area (0.7 per cent). There are little differentials in the population separated and widowed by place of residence.

**Table 4.2: Percentage distribution of population (12 years and over) by marital status**

Marital status	Population			% of population		
	Urban	Rural	Total	Urban (%)	Rural (%)	Total (%)
Never married	355,765	195,197	550,962	48.9	41.7	46.1
Married	324,824	249,835	574,659	44.7	53.3	48.1
Divorced	11,213	3,357	14,570	1.5	0.7	1.2
Separated	2,845	1,521	4,366	0.4	0.3	0.4
Widowed	20,313	13,548	33,861	2.8	2.9	2.8
Not stated	12,013	4,931	16,944	1.7	1.1	1.4
<b>Total</b>	<b>726,973</b>	<b>468,389</b>	<b>1,195,362</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

### 4.3 Female Gambian teenage population (12-19 years) by marital status and ethnicity

Table D.1 (refer to annex, Table D.1) shows the percentage distribution of the female Gambian teenage population (12–19 years) by marital status. The data shows that early marriage within this age group has reduced. Out of a total Gambian teenage population of 176,727 which represents 9.5 per cent of the total population enumerated in The Gambia in 2013, 91.7 per cent reported to be Never married and only 6.6 per cent were married. The proportion of the teenage population divorced, separated and widowed were all less than one percent each. Among the ethnic groups, Fulas (9.2 per cent) and Sarahules (9.4 per cent) have the highest proportion of the teenage population that are married. They also have the lowest proportions of the teenage population that are Never married .

### 4.4 Gambian population aged (12-19 years) by educational attainment and marital status

Table 4.4 shows the percentage distribution of the teenage population by marital status and educational attainment. It is observed from the table that the proportion of the teenage population married is higher among those with no education (54.1 per cent) followed by those with primary education (19.9 per cent) and the least proportion was those with tertiary education (0.3 per cent). It is also shown that a higher proportion of teenage Gambian population who were either divorced (37.3 per cent) or separated (40.4 per cent) have no education. Overall, a higher proportion of the teenage population had attained either Lower secondary or primary education (30.6 per cent and 30.2 per cent respectively).

**Table 4.4: Percentage distribution of Gambian teenage population (12-19 years) by educational attainment and marital Status**

<b>Educational attainment</b>	<b>Never</b>	<b>Married</b>	<b>Divorced</b>	<b>Seperated</b>	<b>Widowed</b>	<b>Not stated</b>	<b>Total</b>
None	20.5	54.1	37.3	40.4	34.2	32.8	23.2
Early childhood	0.2	0.5	0.6	1.2	0.0	0.1	0.2
Primary	31.0	19.9	25.1	26.5	23.8	26.7	30.2

Upper secondary	15.9	8.5	12.5	13.9	15.4	21.4	15.4
Vocational	0.2	0.2	0.0	0.6	0.0	0.3	0.2
Tertiary*	0.3	0.2	0.3	0.0	0.0	0.2	0.3
<b>Total</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

\* Tertiary education includes: Diploma, bachelor, master's and doctoral levels

## 4.5 Type of union

Data on the type of marital union are collected in order to establish the extent and practice of monogamy and polygamy in a given society. In the 2013 census, data on type of union was collected from all ever married persons (i.e. currently married, divorced, separated or widowed). Most marriages in The Gambia are monogamous accounting for 66.6 per cent followed by polygamous with two spouses (22.2 per cent). Males accounted for the highest proportion of the population in monogamous relationship (71.3 per cent) compared to their female counterparts (63.6 per cent). Overall, 35.0 per cent of the females were in polygamous unions compared to 23.4 per cent for males (Table 4.5).

**Table 4.5: Percentage distribution of ever-married population aged 12 years and over by type of union and sex**

Type of Marital Union	Male	Female	Total
Monogamous	71.3	63.6	66.6
Polygamous 2 spouses	18.4	24.7	22.2
Polygamous 3 spouses	3.9	7.6	6.1
Polygamous 4 spouses	1.0	2.5	1.9
Polygamous 5 or more	0.1	0.2	0.1
Not stated	5.3	1.5	3.0
<b>Total</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

## 4.6 Ever married population aged 12 years and over by type of union and educational attainment

Presented in Table 4.6 is the percentage distribution of the ever-married population 12 years and over by type of union and educational attainment. The population with no education were more likely to be in polygamous marriage (75.0 per cent) followed by those with primary education (9.5 per cent) and Upper secondary education (7.4 per cent). Similarly, the highest proportion of those who reported to be in a monogamous union had no education (54.5 per cent) followed by those with primary education (11.4 per cent), whilst those with early childhood education accounted for the lowest proportion (0.4 per cent).

**Table 4.6 Percentage distribution of ever married population aged 12 years and over by type of union, sex and educational attainment**

Educational attainment	Monogamous	Polygamous	Not stated	Total
None	54.5	75.0	41.1	60.3
Early childhood	0.4	0.5	0.2	0.4
Primary	11.4	9.5	13.4	10.8
Lower secondary	10.7	5.7	12.8	9.2
Upper secondary	7.4	7.3	23.7	14.5
Vocational	1.5	0.7	3.0	1.3
Tertiary	4.1	1.5	5.9	3.4
<b>Total</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

\* Tertiary education includes: Diploma, bachelor, master's and doctoral levels

## 4.7 Ever-married economically active population aged 12 years and over by type of union, sex and occupation

Table 4.7 below shows the economically active population aged 12 years and over by type of union, sex and occupation. Males working as plant and machine operators (96.8 per cent) and craft and related workers (92.1 per cent) have the highest proportion in monogamous union. The highest proportions for the females in monogamous union are agricultural workers (62.6 per cent) and elementary occupations (60.5 per cent) by contrast, polygamous union is more prevalent among males working as plant/machines operators (92.0 per cent), legislators, and senior officials (83.6 per cent) and; craft and related works (81.3 per cent). The corresponding categories for females in polygamous union are agricultural Workers (74.1 per cent), elementary occupations (72.1 per cent) and others (60.9 per cent).

**Table 4.7: Percentage distribution of ever-married economically active population aged 12 years and over by type of union, sex and occupation**

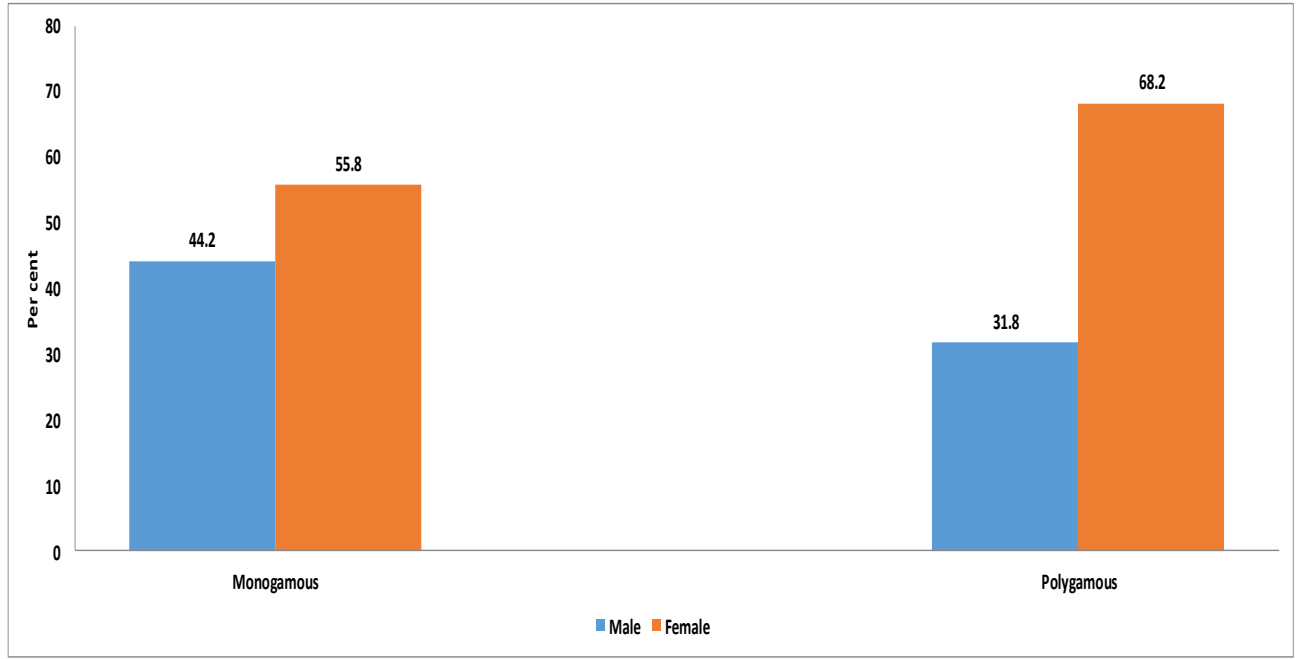

Occupation	Monogamous			Polygamous			Not stated		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
Legislators, Senior Officials	79.0	21.0	100.0	83.6	16.4	100.0	78.7	21.3	100.0

<b>Total</b>	<b>54.8</b>	<b>45.2</b>	<b>100.0</b>	<b>36.8</b>	<b>63.2</b>	<b>100.0</b>	<b>74.3</b>	<b>25.7</b>	<b>100.0</b>

## 4.8 Currently married population aged 12 years and over by sex, age group and type of union

Figure 4.8 shows the currently married population 12 years and above by sex and type of union. It can be observed that monogamy is practiced by all ages, although it varies by age group and by sex. Males, 35–39 years up to those 85 years and over have higher proportions than their female counterparts in monogamous union. Overall, 44.2 per cent of males

compared to 55.8 per cent of females are in monogamous union by contrast, more females (68.2 per cent) than males (31.8 per cent) are in polygamous unions. In both types of unions, females are more engaged in them than males (Figure 4.8 below).

**Figure 4.8: Percentage distribution of currently married population aged 12 years and over by sex, age group and type of union**

#### **4.9 Currently married population aged 12 years and over by LGA, sex and type of union**

In all the LGAs, except Banjul, the proportion of currently married in monogamous union is higher for females than males. The proportion of the currently married male population in monogamous unions ranges from 39.5 per cent in Basse to 52.4 per cent in Banjul. For the females, the proportion ranges from 47.6 per cent in Banjul to 60.5 per cent in Basse. For those in polygamous union, it can be observed that the practice is higher for females in all LGAs but highest in Basse with 72.5 per cent. (refer to annex, Table E.2)

## CHAPTER 5: CONCLUSION

The production and use of quality population data are pre-requisites for the formulation of national and sectoral development plans. Information on the size, distribution and growth of population can be used, for example, in planning settlements, land use, resource allocation, planning for the social services, poverty alleviation programmes, and employment and migration management.

As stated above, the population of The Gambia stood at 1,857,181 in 2013 of which 913,755 or 49.2 per cent are males and 943,426 or 50.8 per cent are females. This represents an increase of 496,500 during the inter-censal period (2003–2013).

However, the population growth rate has increased from 2.7 per cent in 2003 to 3.1 per cent in 2013 this can be attributed to an increase in fertility, a reduction in mortality and an increase in in-migration over out-migration during the inter-censal period 2003–2013.

Since the population growth rate has increased, the population size and distribution poses a challenge to The Gambia's socio-economic development efforts. Given its youthful nature, the population will continue to grow even if fertility continues to drop. This is due to the population momentum caused by the bulge in population between the ages of 15–24 years.

The Brikama LGA with 688,744 persons has the largest share (37.1 per cent) of the total population and the fastest population growth rate (5.7 per cent per annum) during the inter-censal period. This is followed by Kanifing with a population of 377,134 and a 20.3 per cent share of the total population. The large population increases in the Brikama and Kanifing LGAs is mainly due to internal rural-urban migration combined with the influx of external migrants to these LGAs, by contrast, Banjul continues to register a negative growth rate in the past three decades.

Early marriage among females aged 12-19 years have declined in The Gambia. However, the practice is higher among the Fula (9.2 per cent) and the Sarahule (9.4 per cent) ethnic groups. The practice of early marriage is lowest among the Creole/Aku marabouts and Manjagos. One of the reasons for the decline in early marriage among females aged 12-19 years could be attributed to increase enrolment and retention of girls in schools. The continuous practice of early marriage points to the need to intensify the campaign against the practice through the use of all available media and policies. The radio, which is the most widely used media in the country, particularly in the rural areas, could be an effective medium to transmit such messages.
